

SafetyAccessSolutions

Ladder restraint tie

Providing ladder stability for single user operation, in accordance with reg. 16 of the Workplace (Health, Safety & Welfare) Regulations 1992

Ladder tie

The 10mm dia Grade 316 Stainless ladder tie is permanently fixed to the structure using hit resin, thus providing safe "tie-in" positions for free standing ladders. The use of the ladder tie removes the need for a second man footing the ladder. Ladder straps can be supplied if required.

Tie off strap

Simple but effective ratchet strap, usually one used either side of the ladder back to the main structure / building fabric
